RE: SatPro LRIT solution not recommended by SkyWave Mobile Communications

To whom it may concern,

SkyWave Mobile Communications Inc. is a global provider of two-way satellite telematics products and mobile satellite communications using Inmarsat D+ and IsatM2M, the next-generation service based on Inmarsat D+ service. In addition to our standard equipment and services offering, for LRIT, SkyWave is a CSP who provides the DMR-800LRIT terminal.

SkyWave's distribution strategy includes partnerships with equipment and system resellers such as SatPro, who under our Solution Provider agreement integrate SkyWave's communication terminals and network services with their own applications.

As the manufacturer of the satellite terminals that are offered by SatPro, SkyWave does not recommend the SatPro terminals as configured by SatPro for the purposes of complying with LRIT regulations. SatPro has added a proprietary script to SkyWave's terminals which is contingent on SatPro's status as CSP. Notwithstanding the issuance of terminal approval certificates, the SatPro LRIT system has not been accepted by leading ASP's, Test ASPs and many maritime administrations because they do not recognize SatPro as a CSP. These groups maintain that the LRIT regulations dictate that a CSP must have a direct relationship with the satellite provider which SatPro does not.

In order to accommodate ship owners of Liberian registered vessels that have inadvertently purchased and installed SatPro systems with their proprietary script, SkyWave is willing to convert these units by way of an upgrade so that they will function like the DMR-800LRIT units and therefore comply with the IMO LRIT requirements. The airtime expenses required for this "over the air" upgrade will be covered by SkyWave, upon receipt of written acceptance by SatPro and the vessel owner.

We are working with Test ASPs to provide conformance testing procedures. Conformance testing of DMR-800LRIT terminals will be available after February 15, 2009 and the above mentioned upgrade of SatPro terminals will be available until April 30, 2009.

Should you have any questions or wish to schedule the necessary upgrade, please contact the SkyWave Support Team at +1-613-836-4844 or support@skywave.com.

Regards,

SkyWave LRIT Management Team
